Acceptable Use of Generative Artificial Intelligence (AI) Plan

Great Meadows Regional School District

Board of Education

2025-2026

The Board of Education has adopted Policy Guide 2365 – Acceptable Use of Generative Artificial Intelligence (AI) which requires the development of this Acceptable Use of Generative Artificial Intelligence Plan (AI Plan). This AI Plan supplements Policy Guide 2365 by providing detailed guidance, governance structures, and operational standards for the responsible, ethical, and compliant use of Generative Artificial Intelligence (GenAI) within the District.

This Plan is a **living document** and will be reviewed and revised regularly to reflect technological developments, regulatory updates, and instructional best practices.

ACCEPTABLE USE OF GENERATIVE AI PLAN

Introduction

Generative Artificial Intelligence (GenAI) is rapidly reshaping our society in many profound ways. As industries increasingly incorporate this technology into their daily operations, schools must evolve to ensure that students are prepared to enter an AI-optimized workforce and engage as informed, digitally literate citizens of the modern world. Great Meadows Regional School District's mission and vision include supporting and preparing students to be lifelong learners and to be "responsible, engaged partners in the global community." In Great Meadows, we will focus on preparing our students to thrive in an AI-enhanced society, using the most appropriate technology tools available in ways that enhance learning, strengthen critical thinking, and uphold privacy, equity, and academic integrity.

Purpose

While GenAI offers many benefits in educational settings, such as personalized learning, enhanced creativity, and increased productivity and efficiency, educators must also consider several limitations and concerns carefully.

This document serves as a guiding framework for students, staff, and school communities to navigate the appropriate and responsible use of GenAI in classroom instruction, school management, and systemwide operations. Its purpose is to provide clear guidelines for students and staff on using AI responsibly and effectively in Great Meadows Regional School District, ensuring we harness its benefits while being mindful of its limitations and potential risks. As GenAI technology expands, this document will undergo periodic evaluation and evolution to reflect that growth.

Scope

The guidelines in this document primarily concern Generative AI, as distinct from other forms of artificial intelligence. They apply to all students, faculty, staff, administrators, and other stakeholders using Generative AI models and applications on Great Meadows Regional School District devices or networks.

Governance and Oversight

AI Governance Committee
The District shall establish an **AI Governance Committee**, responsible for oversight of all GenAI-related decisions.

Membership may include:
- Superintendent or designee
- Director of Technology or designee
- Curriculum and Instruction leadership

- Special Education representative
- Data Privacy / Information Security representative
- Building-level administration
- Instructional staff representatives

Responsibilities

The AI Governance Committee shall:

- Approve, deny, suspend, or revoke GenAI tools for District use
- Maintain and publish an **Approved AI Tools List**
- Establish and enforce tool configuration and access standards
- Oversee compliance with privacy, security, and instructional requirements
- Review incidents and approve corrective actions
- Conduct at least annual reviews of this Plan

Standards for AI Tool Vetting and Approval

All AI tools proposed for instructional or operational use must undergo a formal vetting process prior to approval.

Minimum Vetting Criteria

Each tool review must document:

- Data ownership, retention, deletion, and training practices
- Compliance with FERPA, COPPA, CIPA, and New Jersey Student Data Privacy Law
- Age restrictions and parental consent requirements
- Security controls (authentication, logging, breach notification)
- Accessibility and special education considerations
- Instructional alignment and pedagogical value

No AI tool may be used with students unless it appears on the District's Approved AI Tools List.

Vendor Assurances and Contractual Obligations

All vendors whose hardware or software incorporates AI and is used by the District must:

- Certify compliance with applicable student privacy and data protection laws
- Agree not to use District data for AI model training without explicit written authorization
- Maintain industry-standard security controls
- Cooperate with District audits and incident investigations

Vendor assurances may be required through signed addenda, data privacy agreements, or other contractual instruments.

Privacy, Data Security, and Enforceable Controls

Prohibited Uses

The following information **may never be entered** into GenAI systems:

- Student names linked to academic, behavioral, health, or disability data
- IEP, 504, evaluation, or counseling records
- Authentication credentials or account information
- Student images or biometric identifiers unless explicitly approved

Required Safeguards

- Only District-approved tools may be used
- Only District-managed accounts may be used
- Staff must complete AI privacy and security training
- Suspected privacy or security incidents must be reported immediately

Academic Integrity, Permission, and Disclosure

Disclosure Standard

When AI is used for coursework, students must disclose:

- Tool name
- Purpose of use
- Nature of AI assistance

Teachers will define acceptable use at the assignment level.

Consistency Measures

Teachers must designate assignments as:

- AI not permitted
- AI permitted for specific purposes
- AI required for defined tasks

AI detectors shall not be used as the sole basis for academic integrity determinations.

Instructional Use and Grade-Band Expectations

Grades K–2

- Teacher-guided use only
- No independent student AI interaction

Grades 3–6

- Teacher-guided use with explicit permission
- AI literacy instruction required

Grades 7–8

- Limited independent use after completion of District AI training
- Teacher authorization required per assignment

AI Literacy and Professional Development

All students and staff will receive age-appropriate AI literacy instruction covering:

- Capabilities and limitations of AI
- Bias and misinformation
- Ethical and responsible use

AI Incident Response and Review

The District shall maintain an **AI Incident Response Plan**, aligned with cybersecurity incident response procedures, to address:

- Data privacy violations
- Misuse or abuse of AI tools
- Security incidents involving AI systems

All incidents will trigger documentation and review by the AI Governance Committee.

Legal and Regulatory Compliance

This Plan is designed to comply with, and shall be implemented consistent with:

- FERPA
- COPPA
- CIPA
- Protection of Pupil Rights Amendment (PPRA)
- New Jersey Student Data Privacy Law
- Applicable New Jersey Administrative Code provisions

Legal counsel review is recommended prior to final adoption.

Alignment with State, National, and International Standards

This Plan aligns with:

- ISTE Standards for Students and Educators
- UNESCO AI Competency Framework for Students and Teachers
- NIST AI Risk Management Framework

Communications, Transparency, and Public Access

The District will maintain a public-facing AI information page that includes:

- This Plan
- Approved AI Tools List
- Parent and community FAQs
- Contact information for questions or concerns

Review and Revision

This Plan shall be reviewed annually and revised as necessary to reflect changes in technology, law, and instructional practice.

What is Generative AI?

Generative AI, or GenAI, is a subset of artificial intelligence that can create new content such as text, images, audio, video, and more. GenAI models are "trained" on massive amounts of data, primarily from the internet, which allows them to recognize and recreate patterns. These models can generate text, images, and other media based on their training data in response to a user input or prompt. Examples of GenAI tools include ChatGPT, Claude, Microsoft Copilot, Google Gemini, Midjourney, and Perplexity.

Types of Generative AI

Type of GenAI	Description	Examples
Conversational (Chatbots)	Simulate human interactions using natural language, allowing users to engage in text or voice-based conversation with an AI	ChatGPT, Claude, Microsoft Copilot, Google Gemini
Multimedia	Processes, understands, and produces various types of media, including images, video, and audio	DALL-E, Ideogram, Midjourney, Adobe Firefly, Suno, Runway
Generative Search	Produces narrative search results in response to natural language questions and queries	Perplexity, Google AI Overviews
AI Writing Assistants	Use natural language processing to analyze and enhance written content	Grammarly Go, Quill, Hemingway Editor

Benefits and Risks of Generative AI

GenAI holds enormous potential for enhancing the educational experience for all stakeholders.

Teachers:

- Enhanced content development: create original lesson plans, instructional materials, and assessments quickly and at scale

- Differentiation: generate text passages at a variety of reading levels, design personalized interventions based on student need, customize instructional content to reflect student interests
- Increase productivity and efficiency: compose emails, newsletters, and other communications quickly, brainstorm solutions to problems of practice, design and manage complex projects quickly and easily

Students:

- Enhanced learning and creativity: use GenAI as a thought partner to spark creative approaches to coursework with teacher permission; create content for multimedia presentations; access to immediate, personalized feedback and review of concepts covered in class
- Increased accessibility: break down assignments into manageable chunks, help organize thoughts, and get started on assignments, translation, and differentiated explanations of content
- Future-ready skills: develop critical thinking skills by analyzing AI-generated outputs, collaborate with GenAI and other students to enhance human originality, understand AI's impact on the world, and engage as an informed citizen

Administrators:

- Data analysis: create reports and analyze trends in large amounts of data to develop actionable insights
- Communication: streamline communication tasks like drafting and revising content for emails, websites, reports, and grant applications
- Professional development: design relevant and meaningful professional development for staff based on school-specific issues and trends, brainstorm unique approaches to problems of practice such as scheduling, teacher evaluations, and discipline

However, these benefits must be weighed in balance against the following risks and limitations of GenAI technologies:

- Threats to academic integrity: Academic integrity can be compromised when students use GenAI tools without permission or disclosure, offloading their learning and presenting AI-generated work as their own.
- Data privacy and security violations: AI systems gather large amounts of data, often used to train the model further. Entering personally identifiable information (PII) into a GenAI model constitutes a privacy violation and makes it vulnerable to data breaches and leaks.
- Bias: GenAI outputs reflect the biases inherent in the model's training data. Since most models are trained on information from the open internet, significant bias is unavoidable.
- Hallucinations/Misinformation: Generative AI tools occasionally present false or misleading information as if it were true. This is due to the

technology's generative nature, prioritizing creativity and task completion over accuracy.

- Misuse: Misuse can occur when users become overly reliant on GenAI tools, undercutting learning and authenticity by offloading valuable learning tasks to AI, and simply accepting AI-generated outputs as correct without interrogating them for accuracy. Using GenAI tools to impersonate, misrepresent, or bully/harass others also constitutes misuse.

Guiding Principles

Effective and responsible AI implementation at Great Meadows Regional School District will strive to realize the benefits of GenAI while mitigating the risks and proactively managing concerns. Any decision-making or use of GenAI tools should be anchored in the following guiding principles:

1. Using AI to Support Teaching and Learning: GenAI use will augment and enhance school and district educational objectives.
2. Protecting Student Privacy and Data Security: GenAI use prioritizes student privacy and safety in compliance with all relevant laws and regulations (e.g., FERPA, COPPA).
3. Building AI Literacy: Promoting AI literacy for both faculty and students ensures responsible use and critical understanding.
4. Ensuring Equity and Accessibility: GenAI tools and resources will be implemented equitably across the Great Meadows Regional School District, with consideration for diverse learning needs and equal access to technology.
5. Advancing Academic Integrity with AI: GenAI usage will be guided by clear standards that promote authentic learning, discourage plagiarism, and foster intellectual honesty in both students and educators.
6. Valuing Human Creativity and Critical Thinking: While leveraging GenAI's capabilities, Great Meadows Regional School District will prioritize and nurture human originality, creativity, and critical thinking skills in all educational processes.
7. Regular Review and Evaluation: Policies and practices will be continually assessed to accommodate evolving GenAI technologies and their applications in Great Meadows Regional School District schools.

General Guidelines for All Stakeholders

Safe and effective GenAI implementations will require the effort and involvement of all Great Meadows Regional School District community members. The following guidelines apply to all stakeholders, including students, faculty, staff, and administrators:

1. **Use GenAI to enhance learning**: leverage GenAI to support and improve educational experiences, never to offload learning or meaningful engagement with content.
2. **Balance GenAI and human input**: use GenAI to complement and expand your personal skills and knowledge, not to substitute for them.
3. **To maintain data privacy**, use secure, vetted tools whenever possible and never input personally identifiable information into a GenAI system.
4. **Build AI literacy**: Take advantage of opportunities to develop your understanding of GenAI tools' capabilities and limitations to make decisions about their use more effectively.
5. **Evaluate GenAI outputs**: Generative AI can make mistakes and perpetuate biases in its training data. Make sure to review all generated outputs for inaccurate information and bias.
6. **Uphold and model academic integrity**: prioritize your original thoughts, and always attribute the nature and extent of AI support in your coursework, lesson plans, or other educational outputs.

Guidelines for Faculty and Staff

Responsible Generative AI Use for Educators

Educators are empowered to determine appropriate GenAI use in their classrooms, subject to all relevant student privacy laws (see Student Privacy, Data Security, and Safety below). We encourage educators to explore GenAI tools and use them creatively to enhance their productivity and instruction. However, it's important to note that GenAI should not be used as a replacement for district curriculum or the teacher's own expertise. Rather, GenAI should complement and augment the teacher's skills and knowledge, serving as a powerful tool in the educator's toolbox. Great Meadows Regional School District will support educators by providing synchronous and asynchronous professional development opportunities on responsible GenAI integration.

Responsible uses for educators include:

- **Content Creation and Enhancement**: GenAI can support the development of engaging multimedia content, spark creative ideas for lessons and activities, and assist in differentiating curricula based on student needs.
- **Communication and Operational Efficiency**: AI-powered tools can help draft emails, create newsletters, and streamline administrative tasks such as scheduling and data analysis.
- **Assessment and Feedback**: GenAI can enhance assessment design, provide initial feedback, and assist with formative assessments. However, certified educators must oversee all graded assessments and ensure alignment with learning standards.

- **Research and Professional Development**: GenAI can efficiently gather and summarize educational resources and research papers and offer personalized professional development opportunities based on educators' interests and career goals.
- **Accessibility and Inclusion**: GenAI tools can enhance accessibility through real-time captioning, text-to-speech, language translation, and content differentiation.

Student Privacy, Data Security, and Safety

Students' data privacy and online safety must be of paramount concern for all Great Meadows Regional School District staff. Any AI integration must be in compliance with the following laws and policies:

- Family Educational Rights and Privacy Act (FERPA): This federal law protects the privacy of student education records. Do not disclose personally identifiable information (PII) when using GenAI tools to ensure compliance.
- Children's Online Privacy Protection Act (COPPA): This act applies to online services directed at children under 13. Before using a GenAI tool with students, confirm that it is COPPA compliant by contacting the Superintendent, or designated authority.
- Protection of Pupil Rights Amendment (PPRA): The PPRA helps keep students' personal information safe when schools use new tech like AI. It ensures parents have a say in how their children's data is collected and used, especially if companies might profit from it.
- Children's Internet Protection Act (CIPA): requires schools to implement internet safety policies and technology protection measures to prevent access to obscene, pornographic, or harmful content. To ensure compliance, only use vetted tools and closely supervise student use of GenAI.
- Board Policies/Student Agreements:
    - Policy 2361 Acceptable Use Policy
    - Policy 5516 Use of Electronic Devices
    - Policy 5512 Harassment, Intimidation or Bullying
    - 1:1 Student Device Agreement
- Age Restrictions: Many GenAI tools have identified age restrictions for use of their platforms (for example, Anthropic's Claude may only be accessed by those aged 18+, while ChatGPT allows use for ages 13-17 with parental consent). All Great Meadows Regional School District stakeholders should abide by these age restrictions when using AI tools, including maintaining accurate parental consent/denial records.
- Any Applicable State Laws: The District will adhere to all existing and future state statutes concerning the utilization of Artificial Intelligence, particularly as it pertains to school and District applications.

Tips for Protecting Student Data Privacy:

- Use only district-vetted GenAI tools with students as selected by the District Administration or its designee(s). These tools are to be evaluated annually.
- Never enter personally identifiable information in a GenAI tool
- Use caution when uploading student work into a GenAI tool
- Adhere to age restrictions for GenAI tools
- Only use GenAI with students who have obtained parental consent
- Explicitly teach basic AI literacy skills before allowing students to use AI independently. All students will complete the Introduction to AI course at the appropriate grade level before engaging with GenAI tools.
- Immediately report suspected or confirmed incidents to the administration
    - If you suspect a privacy violation or data breach has occurred, contact the Superintendent of Schools.

Using Generative AI with Students

GenAI use with students must be carefully designed to align with best instructional practices. Effective implementation requires ensuring that GenAI use is pedagogically sound, enriching student learning rather than offloading it to the technology. Educators should focus on using GenAI to support critical thinking, metacognition, personalized practice, and providing immediate feedback. This can be done by:

- Incorporating AI literacy into instruction
    - Example: Students use a generative search engine like Perplexity to guide their research on a topic under study, then confirm the results using reliable sources
- Providing standalone AI literacy lessons with connections to the course content as a whole
    - Example: Teacher conducts a lesson on identifying bias in AI images before allowing students to create content for in-class presentations
- Using GenAI to develop rigorous, personalized content
    - Example: Teachers use ChatGPT or similar to quickly design a project-based learning unit that can be customized to the unique interests and abilities of a wide range of students while connecting to content standards
- Designing activities and assessments that require both meaningful GenAI use and human contribution
    - Example: Teacher converts a traditional written essay assignment into a class discussion activity, with students using GenAI to summarize their notes on the discussion as part of the final grade

Recommended GenAI Use by Grade Band

Grade Band	Allowed Use
Grades K-2 (Elementary)	Teacher-guided use of District-approved AI tools only after completing

	teacher-delivered training/tutorial lesson(s); May use District-approved AI tools to complete assignments with teacher guidance; May use AI-generated materials that have been developed and evaluated by teachers
Grades 3-6 (Intermediate)	Teacher-guided use of District-approved AI tools only after completing teacher-delivered training/tutorial lesson(s); May use District-approved AI tools to complete individual assignments when explicitly allowed by teacher; May use AI-generated materials that have been developed and evaluated by teachers
Grades 7-8 (Middle)	Independent and teacher-guided use of District-approved AI tools only after completing assigned AI training; May use District-approved AI tools to complete individual assignments when explicitly allowed by teacher; May use AI-generated materials that have been developed and evaluated by teachers

Academic Integrity Concerns

Educators are encouraged to proactively communicate clear expectations about GenAI use to students to avoid academic integrity violations.

- Students must obtain permission from the teacher before using GenAI tools in their coursework, including the use of chatbots, multimedia generators, generative search engines, and AI-powered writing assistants.
- When you doubt using a GenAI tool, consult with the teacher before proceeding. Students must disclose the use of GenAI with proper attribution using MLA, APA, or other guidance the teacher provides.
- Misuse of GenAI, including representing AI-generated work as your own, will be considered a violation of academic integrity policies and will be investigated accordingly as outlined in the outlined in the Great Meadows Regional School District's Student Handbooks/Codes of Conduct.
- The teacher should play the main role in determining violations.

Suspected or Confirmed Misuse

If teachers suspect or confirm misuse of GenAI tools leading to an academic integrity violation, follow the procedures outlined in the Great Meadows Regional School District's Student Handbook/Code of Conduct.
Things to consider when making a claim of misuse include:

- How did the teacher/staff member discover the violation?
- What is the evidence?
- Have they spoken with the student?
- What is an age-appropriate response?
- Does the child understand what cheating is?
- Have there been previous violations?

A Note on AI Detectors
While AI detection tools may be used to investigate possible misuse of AI, Great Meadows Regional School District does not endorse the use of commercial AI detectors as the sole means of determining academic dishonesty. These tools are unreliable and can produce both false positives and false negatives. A recent study of twelve popular AI detection tools found that all had accuracy rates below 80% in identifying AI-generated text. Instead of relying solely on these detectors, we encourage teachers to foster a culture of academic integrity through open discussions about appropriate AI use, clear guidelines for assignments, and the development of critical thinking skills that showcase students' original thought processes. If you suspect misuse, follow the standard procedures outlined in the Student Handbooks or Codes of Conduct for suspected academic integrity violations.

Generative AI and Grading
While GenAI tools can offer valuable assistance in the educational process, the district maintains that certified teachers must conduct all formal grading. GenAI can be leveraged to provide initial feedback and support formative assessments, helping to streamline the grading process and offer students preliminary insights. However, the final evaluation and assignment of grades for all summative assessments and official records must be performed by qualified educators. This ensures that grading decisions are made fully considering context, individual student needs, and the nuanced understanding that only human teachers can provide.

Guidelines for Students

Responsible Generative AI Use for Students
Education is about more than just getting good grades—it's about developing skills, knowledge, and a deep understanding of content. While GenAI can be a powerful learning tool, it's meant to enhance learning, not replace human thought and effort. Responsible GenAI use should deepen learning and creativity, not serve as a shortcut to avoid authentic engagement with coursework.

Students Should:

- Obtain permission:
  - Teachers will clearly communicate GenAI policies to students, but when in doubt, ask before using a GenAI tool on an assignment. Teachers have the final say on when and how GenAI may be used in class.
- Ensure data privacy:
  - Protect personal data when interacting with GenAI systems. Do not enter personally identifiable information (for example, name, address, social security number, phone number, email, birth date, PINs, passwords, medical history, education details, family information, etc.) into GenAI systems.
- Verify GenAI outputs:
  - GenAI systems generate responses based on patterns in their training data, which may be incomplete, biased, or outdated. These systems can magnify social biases, present outdated information, or even confidently state incorrect facts. Students are ultimately responsible for all material created as part of coursework in the Great Meadows Regional School District.
- Prioritize human originality:
  - Use GenAI as a tool to enhance your thinking and creativity, not as a replacement for your ideas and work. Try to build upon or significantly transform the AI-generated content with your own analysis, voice, and insights.
- Maintain transparency:
  - Always disclose GenAI use in your coursework using MLA, APA, or other guidance provided by the teacher.
- Always have respect for others:
  - Remember to use GenAI technologies in ways that honor the rights and dignity of others, avoiding behaviors like harassment or bullying.

FAQs

Teachers

Q: Do I have to use GenAI tools?
A: All teachers will be trained on appropriate and effective GenAI use but retain autonomy in deciding how and when to incorporate it into their professional practice. Any time GenAI is incorporated into a lesson, the teacher must remind students about responsible use and expectations.

Q: How do I request access to a new GenAI tool?

A: The District Administration or its designee(s) selects and updates tools annually. To request a tool, follow the procedures for unblocking websites using the Tech Ticket Form. The tool will then be routed to IT and administrators for approval.

Q: What resources are available to support me in implementing GenAI according to district guidelines?
A: Professional development opportunities will be embedded throughout the year, along with tool-specific training, self-paced courses, and access to the AI page on the district website.

Q: Who do I contact with further questions or concerns?
A: Contact your direct supervisor or building administrator.

Students and Families

Q: How does the district ensure that GenAI tools are appropriately vetted and used?
A: A team of staff well-trained in selecting high-quality digital resources, will thoroughly review and vet tools annually.

Q: What do I do if I see concerning content from a GenAI tool?
A: If you are concerned about a GenAI tool, please contact your student's teacher and school administrator.

Conclusion

As we integrate AI into education, every Great Meadows Regional School District community member will play a crucial role in harnessing its potential while upholding our educational values. This guidance is designed to help educators and students use GenAI to enhance creativity, efficiency, and personalized instruction, while maintaining academic integrity, student privacy, and equitable access. Remember, human originality and creativity remain irreplaceable. As students and faculty work to implement these guidelines, they are encouraged to reflect, adapt, and share experiences. We can create a future where humans and GenAI work harmoniously to provide every student the best possible learning experience.

Note: This is version 1 of a living document that will be reviewed, evaluated, and revised regularly as GenAI technology evolves.

Great Meadows Regional School District
AI Tool Vetting and Approval Rubric

Purpose

This rubric establishes a uniform, documented process for evaluating Generative Artificial Intelligence (AI) tools prior to approval for instructional or operational use.

No AI tool may be used with students unless it has been reviewed and approved using this rubric and appears on the District's Approved AI Tools List.

Tool Information

- Tool Name:
- Vendor:
- Intended Use (Instructional / Operational / Both):
- Proposed Grade Levels:
- Requested By:
- Date of Review:

Evaluation Criteria

1. Privacy & Data Protection (Required)

- ☐ Does not collect or store student PII
- ☐ Data is not used for AI model training
- ☐ Clear data retention and deletion policy
- ☐ FERPA/COPPA/NJ Student Data Privacy compliance documented

2. Security Controls

- ☐ District-managed accounts supported
- ☐ Role-based access controls available
- ☐ Breach notification procedures defined
- ☐ Logging and audit capability documented

3. Age & Consent Compliance

- ☐ Vendor age restrictions documented
- ☐ Parental consent requirements identified
- ☐ Tool eligible for proposed grade levels

4. Accessibility & Special Education

- ☐ Supports accessibility features
- ☐ Compatible with IEP/504 accommodations
- ☐ No discriminatory or exclusionary functionality identified

5. Instructional Value

- ☐ Aligns with curriculum goals
- ☐ Enhances (does not replace) student learning
- ☐ Supports AI literacy and critical thinking

Recommendation

- ☐ Approved
- ☐ Approved with restrictions
- ☐ Not approved

Committee Notes:

Approval Authority:

Review Date:

Vendor AI Assurance and Compliance Addendum

This Addendum applies to any vendor whose products or services used by Great Meadows Regional School District incorporate artificial intelligence or machine learning functionality.

By signing below, the Vendor certifies the following:

1. **Data Protection**
    - Student and staff data will not be used to train AI models without explicit written authorization.
    - Data ownership remains with the District.
2. **Legal Compliance**
    - Vendor complies with FERPA, COPPA, CIPA, PPRA, New Jersey Student Data Privacy Law, and applicable NJ Administrative Code.
3. **Security Controls**
    - Industry-standard security measures are in place.
    - Breach notification will occur within contractually defined timeframes.
4. **Transparency**
    - Vendor will disclose all AI functionality embedded in products.
    - Material changes to AI behavior or data use will be communicated in advance.
5. **Audit & Cooperation**
    - Vendor agrees to cooperate with District audits, investigations, and incident response efforts.

Vendor Name: _____
Authorized Signature: _____
Date: _____

AI Incident Response Plan

(Parallel to cybersecurity IR plan)

AI Incident Response Plan
Great Meadows Regional School District

Purpose

This plan establishes procedures for responding to AI-related incidents, including misuse, privacy violations, and security events.

Incident Types

- Unauthorized AI tool use
- Data privacy or security exposure
- Academic integrity misuse
- Vendor AI malfunction or misrepresentation

Response Phases

1. Identification

- Incident reported by staff, student, or system alert
- Immediate containment actions taken if required

2. Assessment

- Determine scope, data exposure, and impact
- Involve Technology, Administration, and Legal as appropriate

3. Containment & Mitigation

- Disable access to affected tools
- Preserve logs and evidence

4. Notification

- Notify Superintendent/designee
- Parent notification if required by law or policy
- Vendor notification if applicable

5. Review

- AI Governance Committee review
- Corrective actions identified
- Documentation retained

Documentation Required

- Incident description
- Timeline
- Impact assessment
- Corrective actions

Staff Instructional Use Guidance

(Practical classroom guidance)

Staff Guidance: Instructional Use of Generative AI

Core Expectations

- AI may **enhance**, not replace, learning
- Teachers determine when and how AI is permitted
- Student disclosure of AI use is required

Approved Instructional Uses

- Brainstorming and idea generation
- Differentiation and accessibility support
- Draft feedback and formative assessment support
- AI literacy and critical evaluation activities

Prohibited Uses

- Generating final student work without disclosure
- Entering student PII or sensitive data
- Using non-approved tools with students

Assignment Design

Teachers must specify:

- AI not permitted
- AI permitted for limited purposes
- AI required for defined tasks

Assessment Guidance

- Prioritize drafts, checkpoints, and in-class work

- AI detectors may not be used as sole evidence

Parent / Community FAQ

(Public-facing transparency document)

Generative AI – Parent & Community FAQ

What is Generative AI?
Tools that create text, images, audio, or other content based on prompts.

Why is the District using AI?
To support learning, accessibility, and digital literacy while preparing students for a modern world.

Is student data protected?
Yes. The District prohibits entering student PII into AI tools and only approves tools that meet strict privacy standards.

Can AI replace teaching or learning?
No. AI is a support tool; teachers remain responsible for instruction and grading.

How does the District prevent misuse?
Through approved tool lists, staff training, student disclosure requirements, and incident response procedures.

How can parents learn more?
Visit the District's AI information page or contact school administration.

Great Meadows Regional School District
Board of Education

Board Adoption Packet

Acceptable Use of Generative Artificial Intelligence (AI)

I. Purpose of This Packet

This packet is provided to support Board consideration and adoption of the **Acceptable Use of Generative Artificial Intelligence (AI) Plan**. It summarizes the rationale, governance framework, compliance posture, and implementation plan associated with the District's use of AI technologies.

II. Background and Rationale

Generative Artificial Intelligence technologies are increasingly embedded in educational software, productivity tools, and digital learning platforms. The District recognizes both the instructional value of these tools and the legal, ethical, and operational responsibilities that accompany their use.

The AI Plan:

- Establishes clear expectations for students, staff, and administrators
- Protects student privacy and data security
- Preserves academic integrity
- Aligns with state, federal, and national standards
- Provides governance and accountability structures

III. Relationship to Existing Policy

This Plan is required under **Policy Guide 2365 – Acceptable Use of Generative Artificial Intelligence (AI)** and serves as its operational supplement.

The Plan also aligns with and reinforces:

- District Acceptable Use and Technology policies
- Academic Integrity policies
- Student Handbooks and Codes of Conduct

- Data privacy and cybersecurity practices

IV. Governance and Oversight

The Plan establishes an **AI Governance Committee** responsible for:

- Approving and reviewing AI tools
- Maintaining an Approved AI Tools List
- Overseeing privacy, security, and instructional compliance
- Reviewing AI-related incidents and corrective actions
- Conducting annual Plan reviews

This ensures AI use is managed intentionally and consistently.

V. Legal and Regulatory Alignment

The Plan is designed to comply with all applicable laws and regulations, including:

- FERPA
- COPPA
- CIPA
- PPRA
- New Jersey Student Data Privacy Law
- Applicable New Jersey Administrative Code provisions

Legal counsel review is recommended as part of final adoption.

VI. Alignment with Standards

The Plan aligns with recognized frameworks, including:

- ISTE Standards for Students and Educators
- UNESCO AI Competency Framework
- NIST AI Risk Management Framework

This positions the District as proactive and standards-aligned.

VII. Implementation Overview

Upon adoption, implementation will include:

- Establishment of the AI Governance Committee
- Publication of the Approved AI Tools List
- Staff training and instructional guidance
- Student AI literacy instruction
- Vendor assurance requirements
- Incident response procedures
- Parent and community communications

VIII. Recommendation

Administration recommends that the Board of Education **adopt the Acceptable Use of Generative Artificial Intelligence (AI) Plan** as presented, with authorization for the Superintendent or designee to implement and oversee the Plan in accordance with District policy.

IX. Proposed Board Action

Motion:
That the Board of Education adopt the Acceptable Use of Generative Artificial Intelligence (AI) Plan, effective [date], and authorize the Superintendent to implement and administer the Plan consistent with applicable laws and regulations.

Prepared by: _____
Date: _____

Great Meadows Regional School District
Special Education Guidance: Generative Artificial Intelligence (AI)

I. Purpose

This guidance supplements the District's Acceptable Use of Generative Artificial Intelligence (AI) Plan and provides specific direction regarding the use of AI technologies with students receiving special education services.

The intent is to ensure that AI use:

- Supports, but does not replace, individualized instruction
- Fully complies with special education laws and privacy requirements
- Preserves student rights, dignity, and educational access

II. Legal and Compliance Considerations

All AI use involving students with disabilities must comply with:

- IDEA
- FERPA
- COPPA
- New Jersey Student Data Privacy Law
- Applicable New Jersey Administrative Code provisions

AI tools may **not** alter, circumvent, or replace IEP-mandated services, accommodations, or professional judgment.

III. Permissible Uses of AI in Special Education

When approved by the District, AI tools **may** be used to:

- Support accessibility (text-to-speech, speech-to-text, translation, captioning)
- Assist with organization, planning, and task initiation
- Provide differentiated explanations or practice aligned to instructional goals
- Support staff efficiency in drafting materials (not evaluations)

All use must be consistent with the student's IEP or 504 Plan.

IV. Prohibited Uses

AI tools **may not** be used to:

- Generate or draft IEPs, evaluations, progress reports, or legal documents
- Replace required instructional minutes or services
- Make placement, eligibility, or assessment decisions
- Store or process identifiable special education records
- Act as the sole support for a required accommodation

V. Privacy and Data Protection Requirements

Under no circumstances may staff enter into AI tools:

- IEPs, evaluations, or eligibility documentation
- Disability classifications or diagnoses
- Behavioral, medical, or counseling data
- Student names linked to special education services

Only District-approved tools and District-managed accounts may be used.

VI. Instructional Decision-Making

- AI use must be determined by the IEP team where relevant
- AI may supplement, but never supplant, certified special education instruction
- Professional judgment of educators and service providers remains paramount

VII. Training and Oversight

- Staff working with students with disabilities must receive AI-specific training
- The AI Governance Committee will review AI tools proposed for special education use
- Suspected misuse or privacy concerns must be reported immediately
